BSEP Course Descriptions

Fall 2018

Career Exploration Courses (Level 1)

Career exploration (CE) courses are offered to allow students the opportunity to explore the diverse range of careers available within the health and biomedical sciences. CE courses provide students with knowledge of a wide variety of health related fields by creating career connections with health care professionals. Enrollment in a CE course is **required** for all first time BSEP students. At the end of the course, students will participate in a culminating experience building presentation skills and sharing their envisioned future within health care.

Career Exploration: Allied Health

In this course, students will have the opportunity to learn about typical activities in various allied health professions and help them to identify potential careers that match their interests, strengths and goals. Representatives from a range of professions will offer firsthand information on career choices students can explore such as: phlebotomy, imaging/ radiology, physician assistant, clinical rehabilitation and EMTs.

All high school grades

Career Exploration: Interdisciplinary Health

Interdisciplinary is a new BSEP career exploration course that was created in response to an increase in student interest. Interdisciplinary exploration intersects medicine, nursing, allied health and public health and medicine by examining health promotion and prevention at the community level. This course exposes students to non-traditional health care careers.

All high school grades

Career Exploration: Nursing

BSEP Nursing offers students the opportunity to explore a career in the field of nursing. Practicing nurses from varying nursing disciplines will talk to BSEP students about their nursing education, career choice and the day to day responsibilities in the field. Students will gain a broader understanding of the typical skills required of a nurse, explore the educational pathway to a nursing degree and speak to a group of current nursing students about their experiences.

All high school grades

Teen Mini-Medical School (TMMS)

TMMS offers students direct interaction with physicians through the presentation of medical procedures and treatment planning. Students will participate in case discussions, simulation activities and tour the hospital as it relates to various medical specialties. The course gives an experience of the medical processes of care as well as important insights into the career path of physicians.

For 10th graders who have participated in BSEP. 11th and 12th can be first time students.

BSEP Course Descriptions

Fall 2018

Career Development Courses (Level 2)

After taking at least **two** Career Exploration courses, BSEP students are encouraged to enroll in one of the courses below. The goals of these courses are to provide students with an opportunity to develop an understanding of college and career planning, and to gain experience observing a specific career pathway.

Your Career Plan

Preparing for college can be complicated and confusing for high school students and their parents. One of the most common problem students have is that the focus on the idea of entering health care and not the steps to get there. This program is designed to help you plan out your career goals and pathway to college. Using a number of different on-line tools and other resources, this course guides you through a planning process that supports aspirations to enter a health care career.

Grades 11 -12 only

Prerequisite: Two Exploration Courses

Patient Care Skills

Patient care skills go beyond the technical skills required to treat a patient. In this course, students will advance their understanding of the role of the health care professional through the exploration of case studies and an introduction to more advance patient care skills as it relates to bedside manner. Students will get the opportunity to utilize these learned skills by participating in the Baystate simulation lab.

Grades 11 -12 only

Prerequisite: Nursing I or TMMS

Job Mentoring: Medicine, Nursing, and Allied Health

Job mentoring is a work experience course where students learn about a job by walking through the work day as a "shadow" to a practicing health care professional. The job mentoring experience is a temporary, unpaid exposure to the hospital environment in an occupational area of interest to the student. Students observe firsthand the work environment, employability and occupational skills in practice, the value of professional training and potential career options. Job shadowing is designed to increase career awareness, help model student behavior through examples and reinforce the link between classroom learning and work requirements.

Grades 11 -12 only

Prerequisite: Two Exploration Courses

****Job mentoring placement slots is based on student interests and availability of Baystate healthcare professionals****

You must complete an enrollment form. Go to the BSEP webpage and fill out your course enrollment form.
